REASONS FOR ALLOWANCE

- The following is an examiner's statement of reasons for allowance: The present invention is directed to an image compression method. The sole independent claim identifies the uniquely distinct feature, "for producing 2D-vectored according to positions and luminance levels of respective pixels according to degrees of change in luminance levels with reference to line elements connecting starting points and end points of respective vertical rows and converting the image data into compressed image data in matrix form based on the significance levels of the luminance information of the respective pixels". The closest prior art, Mitsuya et al. (USPN 4,205,341), disclose wherein a frame of a gray-scaled picture is divided into blocks, in each of which the mean luminance of picture elements is used as a threshold value for comparison with each picture element signal to classify it into 0 or 1 according to its magnitude to provide a resolution component, wherein from the resolution component and each picture element signal in the block are calculated two gray components, the resolution component and the two gray components are used as coded outputs for each block; while Pohjola (USPAP 2003/0081852 A1), discloses encoding method and apparatus, either singularly or in combination, fail to anticipate or render the above underlined limitation obvious.

- Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
